

Wyoming Log Home Manufacturing Company Akaskan V

The Alaskan V can keep you toasty warm in the rugged temperatures of the North Slope of Alaska as handily as it can keep you cool in an Arizona summer.

What makes the structure so efficient is not insulation but rather lack thereof. The log walls act as the insulation. Not only do they muffle out the wind and rain, but they have a concept known as "thermal banking". Simply put, the square logs store heat in the winter and keep it out in the summer.

Square Footage

Main Level 14' x 24	336 sq ft	Bedrooms: 1
Total Usable	336 sq ft	Baths: 1
